

# LINUX ASSIGNMENT:

## Questions ?

1. What is the difference between mkdir and touch?
2. What is the difference between cp and mv?
3. What happens when you use cat > file.txt and the file already exists?
4. What happens when you use cat >> file.txt and the file already exists?
5. What does Ctrl+D do when using cat > file.txt?
6. What is the difference between cat and tac?
7. What is the purpose of head?
8. What is the purpose of tail?
9. How do you display only the first 5 lines of a file?
10. How do you display only the last 5 lines of a file?
11. What happens if you use mv to move a file to another directory?
12. Can cp copy a directory? If yes, what option is generally required?
13. where do you find system log files? which directory?

## Assignment-1: Create a Directory Structure

Starting from your home directory, create the following structure:

linux-assignment/

```
├── students/
├── trainers/
├── courses/
│   ├── linux/
│   ├── docker/
│   └── kubernetes/
└── notes/
```

Use only mkdir commands for creating the directories.

## Assignment 2 – Write Your First File

Create:

student.txt

Use:

cat > student.txt

and write at least 5 lines containing your details.

**Example:**

Name: Rahul

Course: SRE

Experience: Fresher

Location: Hyderabad

Goal: DevOps Engineer

### **Assignment 3 – Append Data**

Take the student.txt file from Assignment 5.

Using:

cat >> student.txt

append at least 5 more lines.

Do not overwrite the existing content

### **Assignment-4:**

**Create the following files in one directory named "devops"**

linux.txt

docker.txt

kubernetes.txt

student.txt

trainer.txt

linux-notes.txt

docker-notes.txt

k8s-notes.txt

**Create the following directories:**

courses/

students/

trainers/

notes/

Now organize the files by moving them into appropriate directories using mv.

## Assignment-5:

### Create:

institute/

├── students/

| ├── batch1/

| └── batch2/

├── trainers/

├── courses/

| ├── linux/

| ├── docker/

| └── kubernetes/

| └── aws/

├── notes/

└── backups/

### Then:

Create 3 student files in batch1.

Create 3 student files in batch2.

Create a trainer file.

Create syllabus files for all courses.

Write syllabus content using cat >.

Append additional topics using cat >>.

Copy the Linux syllabus to notes/.

Copy the Docker syllabus to backups/.

Rename one student file using mv.

Display syllabus information using cat, head, tail, and tac.
